

Landing Page with ChatGPT - Prompts

1. Hero Banner section

ChatGPT Plus

I am creating a landing page for my online course, it consists of 4 sections. Firstly generate the code for "Hero Banner" on my landing page. Please structure the page to look like the uploaded image, and include a placeholder for all the texts and background image. Reference the background image as 'images/banner/1.jpg' in the code. Make sure the title text is big and add a border to the title text to make it stand out.

ChatGPT Free:

"Create a hero banner section for a landing page with the following specifications:

1. **Background:**

- Use a background image that fills the entire section and covers the viewport height (100vh). Position the image to be centered both horizontally and vertically.
- Reference the background image as 'images/banner/1.jpg'.

2. Text Elements:

- Include three lines of centered text in the middle of the banner:
 - **Title Text:** Display this as the topmost line, with large, bold text. Add a light background behind the title (e.g., semi-transparent white) to make it stand out, and add a solid border around the text. Set the font size to around 48px and include padding within the background box to give the title some spacing.
 - **Headline:** Centered below the title, the headline should be in bold, slightly smaller than the title (around 40px font size), and use a darker font color for contrast. Ensure the text wraps into two lines if needed, with the line break between words.
 - **Subheadline:** Place a subheadline centered below the headline. This should be smaller in font size (around 24px), in a lighter gray color, and also center-aligned.

3. CTA Button:

- Include a large, rounded CTA button below the subheadline with the text 'Access Now.' The button should have the following style:
 - Background color: light beige (#FFD966).
 - Font color: dark gray or black for contrast.
 - Border: a thick purple border around the button.
 - Shadow: add a red shadow behind the button, offset slightly to give a 3D effect.
 - Rounded corners for a pill-shaped look.
- Add a hover effect so that the button grows slightly larger when hovered over.

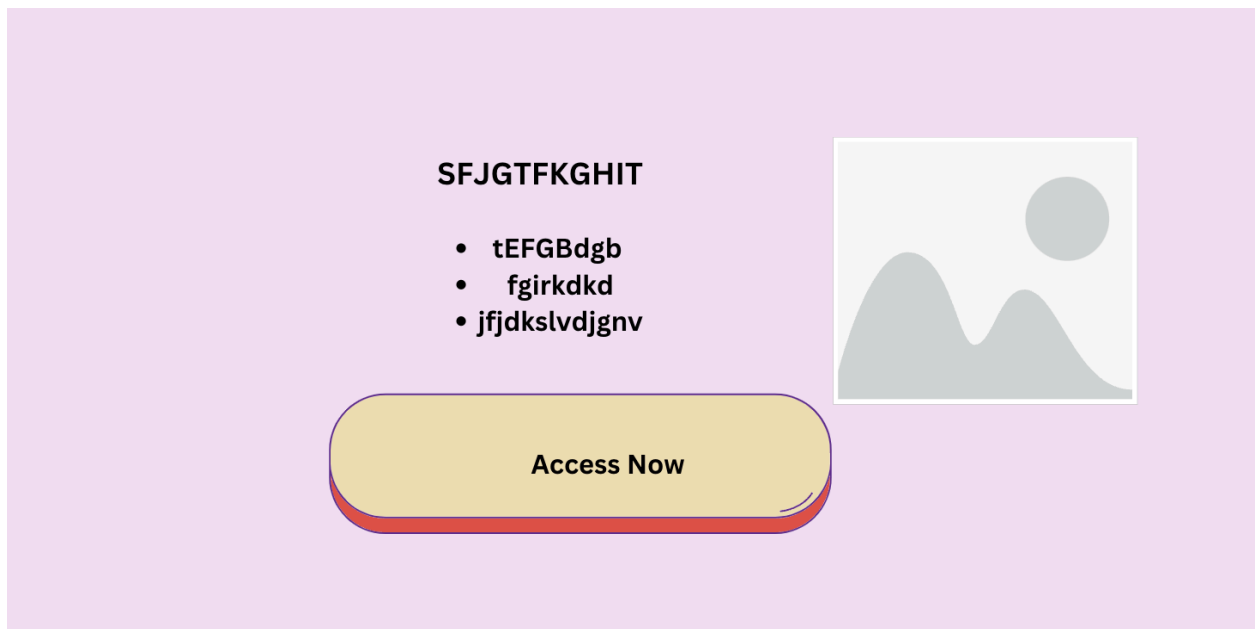

Center all the elements both vertically and horizontally within the banner section, and ensure the text and button adjust responsively for different screen sizes."

2. Middle section

ChatGPT Plus

Generate the code for the “middle” section. Place this section directly below the hero banner. Center the entire content horizontally, ensuring the layout has visual whitespace on the left as if there’s a placeholder for an image. Use `padding-left` or `margin-left` to create whitespace on the left, making the text and image appear centered as a group.

Please structure the page to look like the uploaded image, and include a placeholder for all the texts and background image. Reference the background image as “images/middle/1.jpg” in the code.

ChatGPT Free:

Prompt:

"Create a middle section for a landing page with the following specifications:

Background:

- Set a light lavender background color (`#F2E9F3`) for the entire section.

- b. Center the entire content horizontally, and create visual whitespace on the left by using `padding-left: 150px` or similar padding. This padding simulates an image placeholder without displaying an actual image on the left side.

Content Layout:

- c. Use a centered layout with two main parts:
 - i. **Text Section** on the left, containing a title, a list of bullet points, and a CTA button.
 - ii. **Image Section** on the right, with an image placeholder (reference the image as 'images/middle/1.jpg').
- d. Make the **Text Section** and **Image Section** appear centered as a group.

Text Section:

- e. Add a title at the top of the text section with large, bold text, around `36px` in font size. Center the title vertically within the content.
- f. Below the title, add a bulleted list of three items. The font size should be around `18px`, and the text should be dark gray (`#333`).
- g. Include a **CTA button** below the list with the following styles:
 - i. Font size: `24px`
 - ii. Background color: light beige (`#FFD966`)
 - iii. Rounded corners (pill-shaped button)
 - iv. Purple border and red shadow to create a slight 3D effect
 - v. Include a hover effect that slightly enlarges the button.

Image Section:

- h. On the right side, add an image placeholder that fills about 80% of the width within its container. Center the image placeholder within the `.image-section`.

Responsive Design:

- i. Ensure the layout adjusts well on different screen sizes, with the text and image sections stacking vertically on smaller screens if needed."

3. Bottom section

ChatGPT Plus

Please add a third section to this html called 'bottom'. Please structure the page to look like the uploaded image, and include a placeholder for all the texts. Make sure you underline the title text. Only include the code where I need to add to the existing code and make the clear instructions on where to add the new code

ChatGPT Free

"Create a bottom section for a landing page with the following specifications:

1. Section Background:
 - Use a light lavender background color (#F2E9F3) for the entire section.
 - Center-align all content horizontally.
2. Title with Underline:
 - Include a title at the top of the section with the text 'bottom-title'.

- Style the title in bold, large text (around 32px in font size) and place an underline directly beneath it.
 - Use a dark gray color (#333) for the title and ensure the underline is about 3px thick and matches the title color.
 - Position the underline slightly below the title text for a clean look.
3. Subtitle:
- Add a subtitle directly below the title with the text 'bottom_subtitle fgtytgfugjgkgut'.
 - Center-align the subtitle with a font size of 18px and color it in a medium gray (#555).
4. Benefit List with Check Icons:
- Below the subtitle, add a list with four benefit items, each styled as follows:
 - Each list item should display a green check icon on the left, followed by a bold item description (e.g., 'shfhgkglhlgjhjh') on the left, and a value label ('value: priceless') on the right.
 - Align the check icon with the list item text and give it a green color (#4CAF50) with a font size of around 24px.
 - Use a horizontal alignment with space between the item description and value label.
 - Add a light gray border beneath each list item for separation.
5. Final Note:
- At the bottom of the section, include a final note in bold, large text (around 24px), centered horizontally.
 - The final note text should be 'Yhflwnglkhlll lhhjgyigjkfl' and styled in dark gray (#333).

Ensure all elements are center-aligned within the section, with consistent spacing between each text element and list item."

4. Subscription Form

ChatGPT Plus

Please add a final section to this html called subscription form and include a background image placeholder, reference this image as "images/form/1.webp". The form should include first name, last name, email address and CTA to subscribe. Please add a title above the subscription form

5. Point CTA buttons to Subscription Form

ChatGPT Plus +ChatGPT Free

On the html page please point all the CTA buttons to the final subscription form

Guidelines for Developing My Landing Page For My Service/Products

Please follow these instructions for all tasks related to creating my landing page:

Code Requirements: Provide both HTML and CSS code.

Use Bootstrap:

- Utilize Bootstrap for all styling and layout purposes.
- Ensure consistent design throughout the website, including typography and responsive features, by using Bootstrap's framework and classes.

Single File Format:

- Deliver all code (HTML and CSS) in one single file for simplicity.

Beginner-Friendly Instructions:

- Since I am new to HTML and CSS, please provide clear, easy-to-understand instructions tailored to my beginner level.

Specifically:

- Cumulative Building: Each new section of code should integrate smoothly with previous sections. Please guide me on where to insert each new block of code within the existing structure without repeating universal elements unless necessary.
- Placement Instructions: For every new code snippet, provide explicit directions on where it should be placed in the current file. For example, if I need to add a "Projects" section after the "About" section, instruct me to start the new code immediately after the closing `</section>` tag of the "About" section.
- Avoid Redundancy: Ensure that the provided code snippets do not unnecessarily repeat elements that have already been established in the initial template.
